EXPERIENCE

Toggl Track, Tallinn, Estonia — Contractor (Remote)

July 2022 - Present

I am working on a web application built using ReactJS, Redux, Typescript, Jest and Yarn workspaces, which is being actively used to track time by 600k active users and has 2M+ registered users.

I worked on maintaining crucial parts of the app such as the timer page and worked on building Timesheets and approvals features as part of a team, where my role was to translate figma designs into high quality pixel perfect screens, breaking down features into issues, taking ownership and being accountable for on time delivery of the project and profiling critical portions of the app to ensure speed and performance

I also contributed to other projects such as Design System development, TypeScript migration etc

ShoppinPal, Pune, India — Full Stack Engineer

February 2021 - July 2022

Building an iPaaS that would integrate Online Ordering, POS, Accounting, Hospitality, etc.

Worked on writing individual connectors & services which were part of a distributed system.

Involved in the full lifecycle from client communication, planning to delivery

Built Connector Services that handle the processing of 50k+ orders per day

Also built an Enterprise UI which is being used by brands such as Yelp, GoDaddy and Flipdish, etc, allowing them to self-serve and **save 1000s of dollars in Support and Operations**. It reduced the operational costs by 30%

CORE SKILLS

Node.JS, TypeScript

React.JS

MongoDB, MySQL, Redis

Docker, Linux

Git

Jest, Mocha, Cypress

SKILLS (WORKING EXPERIENCE)

Kafka, CI/CD

MicroServices, Vault
Terraform

Angular, Android

SKILLS (BEGINNER)

GoLang, Kubernetes

gRPC, GraphQL

LANGUAGES

English & Hindi

McKinley & Rice, Noida, India — Junior Web Developer

February 2020 - February 2021

Worked on embedded React Native Application & AWS Lambda written in python for strongarmtech.com

The Application is deployed across **100s of Walmart's warehouses** and is helping athletes reach home without injuries while **increasing efficiency by 37%**, thus saving them millions of dollars in labor costs

EDUCATION

Jaypee University Of Engineering & Technology, Guna, MP— B.Tech

2016 - 2020

Worked with 3-4 startups on internships while working on their projects

built on Android, MERN, MEAN and learned a lot from the experienced and ambitious folks

PROJECTS (OPEN SOURCE)

GitPM Node— *npm wrapper that allows installation of git repository over HTTP*

Installing npm repositories from git over HTTP requires the username & password to be embedded into package.json this package uses an auth.json file for credentials

calcom/cal.com #2580 feat(app-store): Add Giphy app
(<https://github.com/calcom/cal.com/pull/2746>)

open-telemetry/opentelemetry-go #4574 Replace otlptracehttp example to use otlptracehttp instead of otlptrace

(<https://github.com/open-telemetry/opentelemetry-go/pull/4574>)

PROJECTS (CONTRACT)

HairEducation.Me— <https://haireducation.me> (Discontinued)

An LMS for hair professionals built on NodeJS & Angular (SSR).

Allows users to subscribe or pay per video

AlwaysHired — <https://www.alwayshired.com> And <https://app.alwayshired.com>

Built & managed WordPress theme & Training app (NodeJS & Angular)

AlwaysHired currently is a \$50M Valuation startup

The Training app is in action for almost 3 years now.

It has handled the process for 600+ students and has helped always hired to **reduce the operational workforce by 20%**

The website is bringing in almost **45-60% of the leads** through organic SEO and chatbots.
